ABOUT ME

I recently completed a master's degree in Statistics and have a strong background in simulation studies, machine learning, and mathematics. My interests lie in causal inference and its theoretical foundations, particularly targeted maximum likelihood estimation and semiparametric efficiency theory. I am motivated by developing advanced statistical methods and applying them to complex real-world problems, while communicating insights through effective visualisations and clear scientific writing.

EDUCATION

Master of Science in Statistics Sep 2024 – Jun 2026
University of Copenhagen

- Specialisation in Causal Inference and Machine Learning
- Thesis on positivity violations and incremental propensity score interventions, supervised by Helene C. W. Rytgaard and Anders Munch
- Final GPA: 10.3 (Danish 7-point scale: 12 highest – 02 pass)

Bachelor of Science in Mathematics Sep 2021 – Sep 2024
University of Bonn

- Specialisation in Statistics and Numerical Mathematics
- Thesis on conformal prediction under covariate shift, supervised by Jochen Garcke
- Final GPA: 2.4 (German grading scale: 1.0 highest – 4.0 pass)

Elite Sports School Sep 2014 – Jul 2021
Joh. Chr. Fr. GutsMuths Sportgymnasium Jena

- Abitur (German equivalent to A-levels)
- Fenced competitively and attended a boarding school
- Final GPA: 1.1 (German grading scale: 1.0 highest – 4.0 pass)

ACADEMIC WORK EXPERIENCE

Tutor for Statistics in Biology Apr 2024 – Sep 2024
Institute for Applied Mathematics, University of Bonn

- Led practical R exercise sessions for approx. 15 students
- Explained theoretical concepts and clarified lecture material
- Assessed assignments and provided detailed feedback to support exam preparation
- Evaluated final examinations

Tutor for Preliminary Programming Course Sep 2023
University of Bonn

- Introduced a group of 12 first-year students to Python and C++
- Set up programming environments and resolved technical issues
- Supervised and assisted the group during exercises
- Equipped students with foundational knowledge for their first courses

Practical Lab Numerical Simulation Apr 2023 – Jul 2023
Institute for Numerical Simulation, University of Bonn

- Learned about algorithms in machine learning and their application
- Wrote Python-code and used libraries (Scikit-learn, TensorFlow, Keras) to classify data and predict outcomes
- Topics: linear regression, support vector machines, principal component analysis, neural networks, reinforcement learning
- Collaborated with a partner via GitHub and presented a project on representation learning for face images

RESEARCH AND COMMUNITY ENGAGEMENT

At the beginning of my master's degree, I joined the Danish Statistical Society (DSTS) and have since attended its biannual two-day meetings, where researchers and practitioners in statistics present their work. I also attended seminars and research talks organised by the Department of Public Health, including events with renowned researchers such as the Causal Inference Symposium, which provided valuable exposure to current research.
Besides that, I engaged with research through coursework-related projects in causal discovery and policy evaluation and attended a reading group on heterogeneous treatment effect estimation at the Section of Biostatistics, University of Copenhagen.

PROGRAMMING EXPERIENCE

- **R** (synthetic data generation; methodological implementation; simulation studies; reports)
- **ggplot2 Uncharted** online course by Yan Holtz and Cédric Scherer (foundations; custom themes and styling; annotations; facets and multi-plot layouts; spatial data and grid maps; interactivity and animation)
- **Python** (numerical computing and machine learning algorithm implementation)
- LaTeX (scientific typesetting and Beamer presentations)
- Git/GitHub (version control and collaborative workflows)
- pip/conda (virtual environments for reproducible research projects)

LANGUAGES

German is my native language. I began learning English in primary school and obtained a Cambridge Certificate in Advanced English (CEFR C1) at the end of my bachelor's degree. My master's programme was conducted entirely in English, which I used daily in academic and professional contexts. Alongside my master's programme, I studied Danish at a language school and used it in everyday situations whenever possible. I obtained the Prøve i Dansk 3 certificate (CEFR B2) at the end of my master's degree.

PERSONAL LIFE

In my free time, I enjoy demanding sports, as they provide a good balance to theoretical work and help me stay motivated and maintain a strong work ethic. I competed in fencing for over ten years and also practised Jiu-Jitsu and long-distance running. I now focus on calisthenics and climbing. Calmer activities include reading (mainly classic literature), baking, and spending time with friends while cooking together.
